EXECUTIVE SUMMARY

This report presents strategic analysis of digital channels of Nike comparatively against its major competitor Adidas. Relying on such influencing models as e-SERVQUAL, Customer Experience principles, and WebQual, the given paper will analyze the level of effectiveness of the digital ecosystem operated by each of the brands in terms of corporate websites, mobile applications, and social media presence. Such tools as SEMrush, SimilarWeb, or Website Grader by HubSpot add the analysis to real-time outcomes of performance.

Nike is a well-developed and digitally mature company with consistent omnichannel interaction, mobile-first orientation, and community-driven outreach. Exclusivity, empowerment and innovation are features noted under its Online Value Proposition (OVP). The SWOT analysis shows platform integration and brand visibility as the digital strength and AI personalization and mobile commerce as opportunities available to Nike. Adidas offers a diversified strategy that is based on the Green and product partnership.

The criteria to analyze are based on theoretical studies in the academic field, as well as on the best practices of the providers of digital marketing services. It is based on this foundation that actionable insights can be realized and a recommendation to support Nike in future strategic cycles is prepared with strategic recommendations to enhance Nike digital performance.

INTRODUCTION

This report provides an analysis of digital channels, contrasting the global sportwear brand Nike with its principal competitor, Adidas. The objective of this digital marketing consulting project is to analyze and evaluate Nike's online presence, service design, and digital channel utilization, comparing it to Adidas. The scope includes an analysis of websites, mobile applications, and social media platforms, emphasizing their online value propositions (OVP) and pinpointing chances for strategic enhancements. The research employs theory-based criteria and external resources to offer actionable recommendations for improving digital marketing efficacy.

Nike, as the client brand, has positioned itself as a digital frontrunner int the athletic apparel sector with creative digital experiences, robust e-commerce integration, and purpose-oriented branding (Nike Inc., 2023). Adidas, a significant competitor in the same industry, employs a distinct strategy emphasis on content and engagement, frequently utilizing sustainability and collaborations to distinguish its brand (Adidas Group, 2023). This report intends to analyze these strategies and guide Nike's future digital marketing decisions.

CLIENT OVERVIEW

Nike Inc. is a global corporation recognized for its design and production of athletic footwear, apparel, and accessories. Nike has a well-developed digital ecosystem that encompasses:

Corporate website: The corporate website Nike.com provides comprehensive e-commerce functionalities, compelling brand narratives, community-oriented features such as Nike Run Club, and tailored user experiences.

Mobile Apps: Nike manages multiple applications, such as the Nike App for shopping and loyalty, Nike Training Club, and Nike Run Club, which collectively facilitate commerce and fitness objectives (Statista, 2024).

Social Media Presence: Nike has a robust social media presence, with active accounts on Instagram (over 308 million followers), YouTube, Twitter/X, Facebook, and TikTok. The platform consistently showcases influencers, athletes and content with social relevance to strengthen brand values (Sprout Social, 2024).

Nike's online Value Proposition emphasizes innovation, community engagement, and inspiration. The platform provides exclusive product access, seamless omnichannel integration, and personalized experiences that embody the brand's principles of motivation and empowerment (Chaffey & Smith, 2017).

Digital marketing is essential for Nike because of the growing consumer transition to online and mobile- first interactions. Digital platforms facilitate Nike's Direct-to-consumer (DTC) sales, enhance brand loyalty, and leverage data for informed strategic decisions (Forbes, 2023).

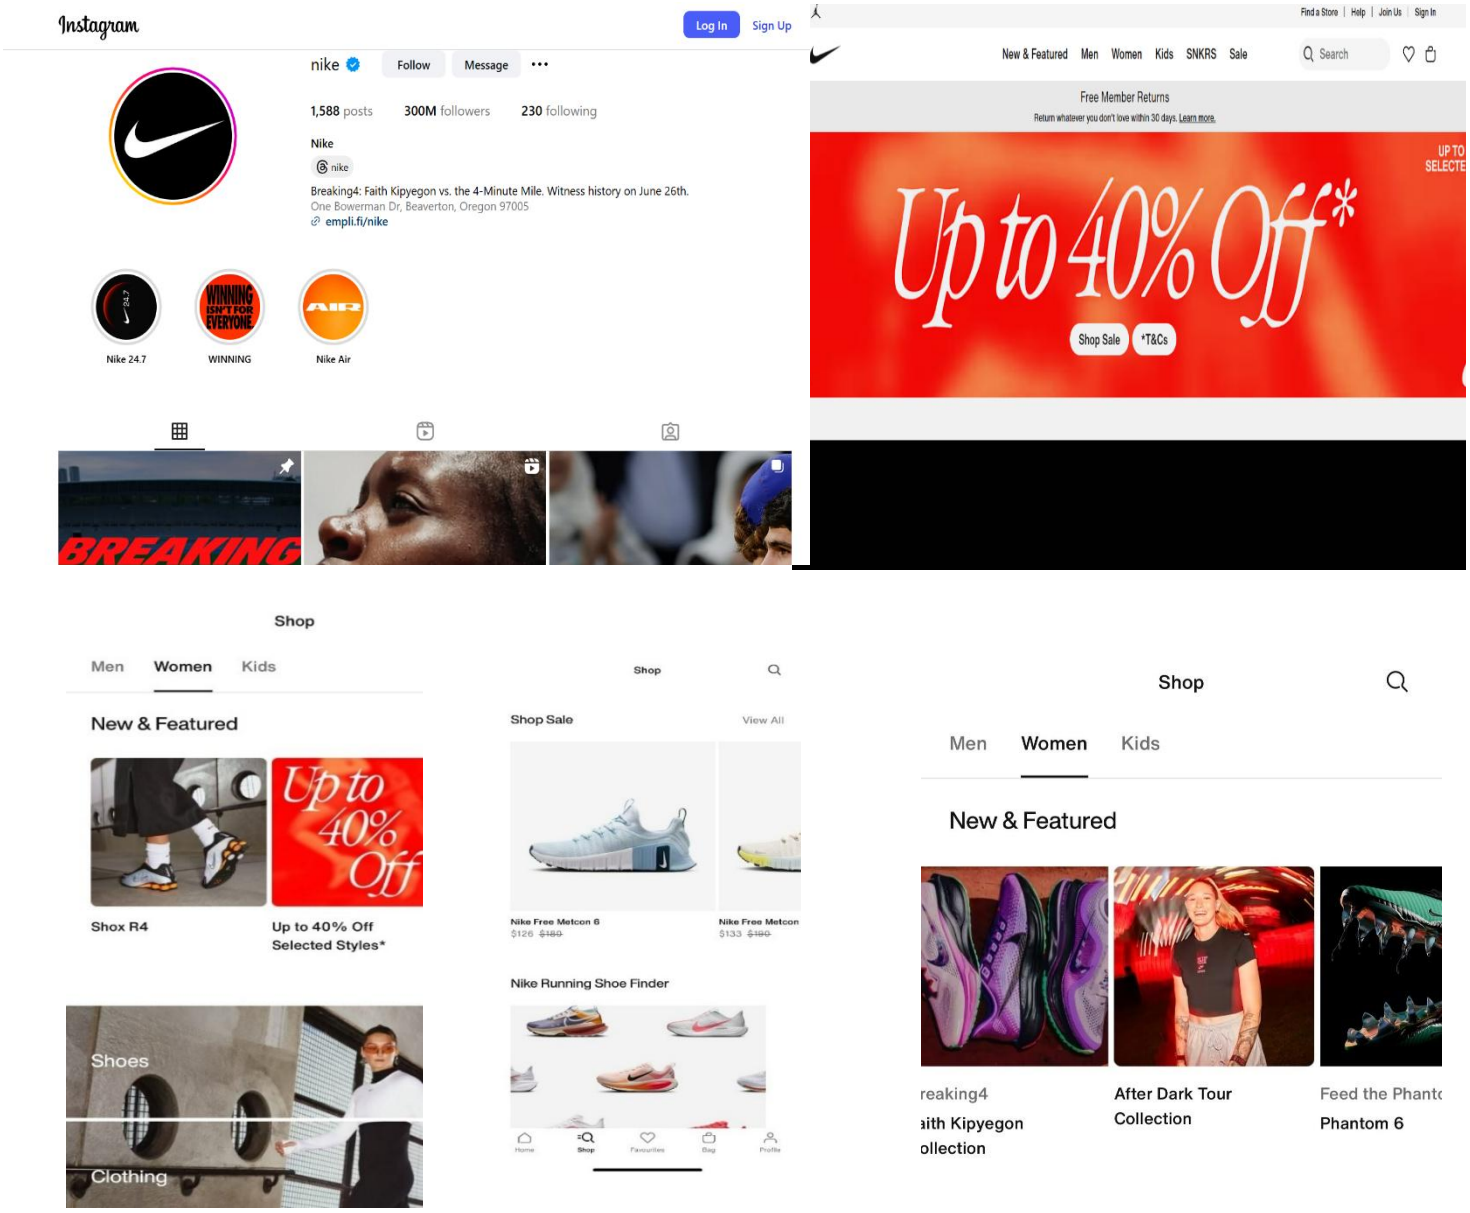

Figure 1

DIGITAL CHANNEL ANALYSIS CRITERIA

The evaluation of Nike's and Adidas's digital channels was conducted using the following theory-informed criteria:

1. e-SERVQUAL (Zeithaml et al., 2000) assesses digital service quality through dimensions including efficiency, reliability, fulfilment, privacy and responsiveness. This is especially beneficial for evaluating user experiences on e-commerce platforms and mobile applications.

   e-SERVQUAL provides a systematic method for evaluating service quality on the digital platforms of Nike and Adidas.
2. Experience (CX): Encompassing touchpoint consistency, content, relevance, usability and mobile responsiveness. The principles evaluate the simplicity and enjoyment of the user experience (Lemon & Verhoef, 2016).

   Customer Experience principles are crucial for assessing the emotional and cognitive ease of the user journey.
3. Social media engagement metrics, including interaction rates, follower growth, post frequency, and video engagement, are critical for assessing content effectiveness and community responsiveness (Kaplan & Haenlein, 2010).

   Social Meida metrics offers insight into engagement levels and the effectiveness of communication with target audiences.

Besides the above frameworks, SWOT analysis can be employed to offer some strategic perspective to consider the internal and external circumstances that can affect the performance of digital channels. The SWOT assists in determining how the strengths (e.g. the app ecosystem built by Nike), weakness (e.g. the localization of content matters), opportunities (e.g. the use of AI in the process of mobile business), and threats ((e.g. The increasing cost of advertisements) weaken or enhance the occurrence of the company to connect with the consumers over the internet. Benchmarking may involve the use of SWOT to provide concepts that can be evaluated more contextually and practically (Kotler et al., 2019).

The analysis incorporates scholarly frameworks and best practices from prominent digital marketing service providers. HubSpot's Website Grader assesses fundamental aspects including performance, SEO, mobile readiness, and security, reflecting components of e-SERVQUAL.

SEMrush and SimilarWeb provide performance benchmarks regarding website traffic sources, bounce rates, and keyword strengths, which correspond CX and VERA dimensions (SEMrush, 2024; SimilarWeb, 2024).

Similarly, Online Value Proposition (OVP) is also very important in knowing what unique value the company brings to the online environment. OVP is integrated into the digital touchpoints of Nike brick-and-mortar stores with exclusive premium content, effortless buying, individualized experiences, and social connectedness. The reflection of OVP on the analysis will guarantee the clear emphasis of analysis regarding brand distinction, user relevancy, and digital competitive advantage (Chaffey & Ellis-Chadwick, 2019).

HubSpot (2023) indicates that brands with effective websites typically maintain low page load times, optimized SEO content, and a mobile-first design-elements that enhance customer satisfaction and decrease bounce rates. The insights hold particular significance for Nike and Adidas, as their audiences predominantly consist of mobile-native users who anticipate seamless and rapid-loading experiences across various devices.

The criteria establish a comprehensive framework for evaluating Nike's performance relative to Adidas in terms of digital channel effectiveness, informed by service quality, strategic marketing, customer psychology, and usability research. Analytical tools like Similar Web, SEMrush, Website Grader, and Built With will enhance the frameworks by providing quantifiable data.

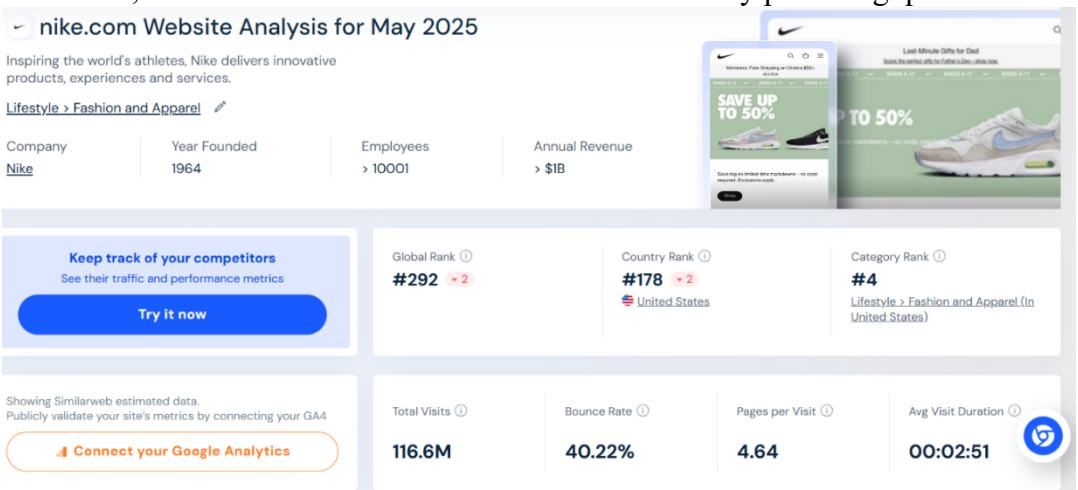

Figure 2

COMPETITOR ANALYSIS- Adidas

The main global rival of Nike is Adidas, which has an all-round and technology-oriented digital strategy. The given segment presents a systematic exploration of the digital experience of Adidas on the web, mobile, social, and innovation platforms. Adidas' strengths and weaknesses are evaluated based on the frameworks of E-S-QUAL, WebQual and MSQ to offer practical information by evaluating the primary digital touchpoints to help Nike benchmark its competitive strategy.

Ecommerce Performance and E-commerce UX

Navigation & Search (WebQual Focus) The site of adidas (https://www.adidas.com.au) is simply designed with minimal elements, optimized to be accessed via mobile, and priorities visual scanning. Its navigation menu also counts on shorter menus like Men/Women/Sports/Sustainability to allow the user to refine the search by product type or campaign. The search is useful and allows for predicting keywords and recalling recent searches. Yet, Baymard Institute (2023) complains that filtering does not have fixed left-side options, and long scrolls even lack sticky headers at category pages, decreasing usability. These attributes are very critical and important in navigating through e-commerce, especially when using mobile devices.

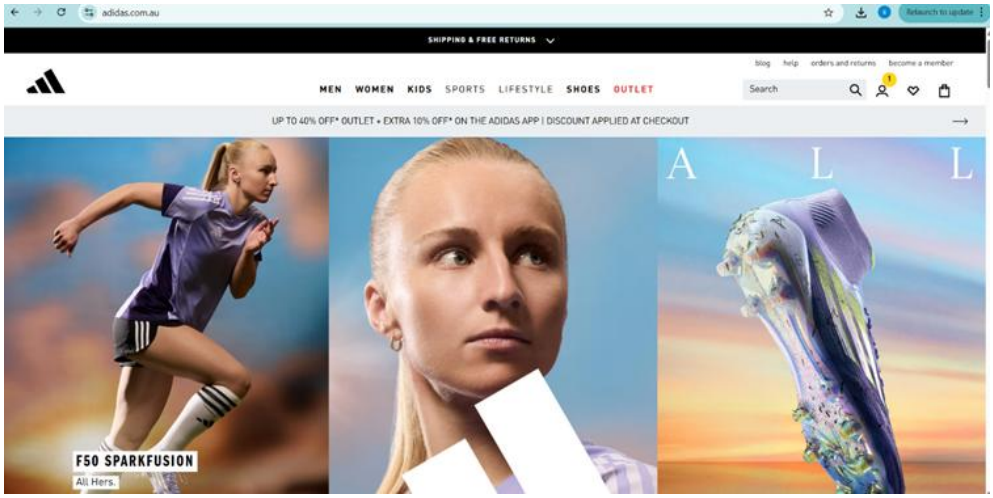
Product Display and Trust Signals Just like in the mobile app, on the product pages, each product has high-resolution zooming images, AR previews of the chosen sneakers, as well as personalized recommendations based on browsing history. User decision-making is also aided by product tagging such as Sustainable or Best Seller. The availability of size, shipping estimations and refund policies are displayed above the fold, and this promotes buyer confidence. The embedded customer reviews and the dynamic Q&A are also signs of Adidas trying to build trust.

E-S-Qual Service Quality

- Performance: The pages take a maximum of 3 seconds to load, and the mobile responsiveness is optimized and media compression.
- Fulfillment: Inventory status is in real time. Availability of Click and Collect, as well as express delivery is visible.

- System Availability: There were not any major periods of downtime; CDN support provides regional delivery.
- Privacy: Data protection is supported by secure HTTPS protocol, cookies preferences, and GDPR tracking.

Adidas' site follows the E-S-QUAL model in that it offers a credible, safe and timely e-shopping experience.



MSQ Study and Mobile App Ecosystem

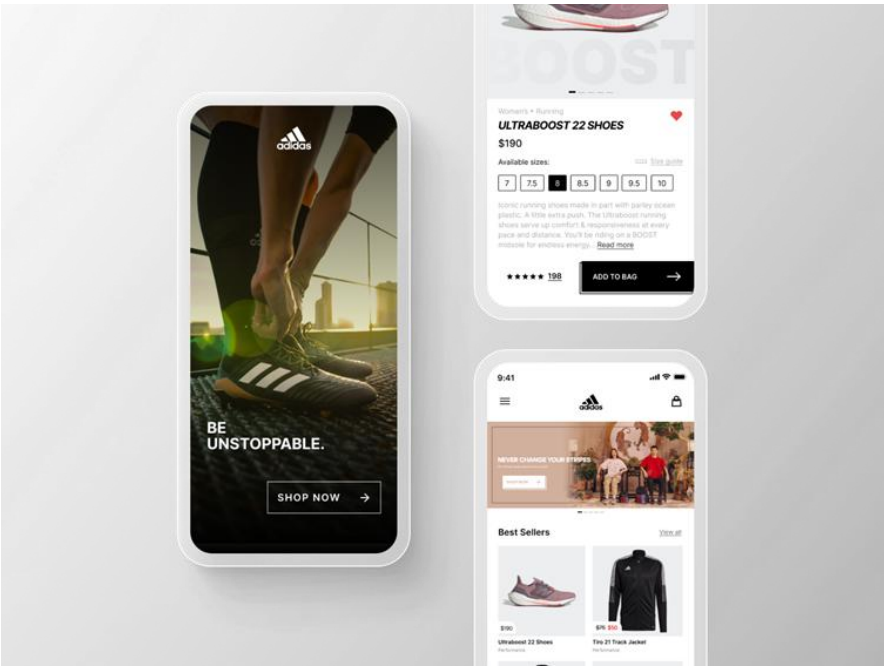
Adidas also provides two primary mobile apps: one named "Adidas" (shopping, exclusive drops, loyalty) and the other two named "Adidas Running" and "Training" to participate in physical activity. The applications are distributed on iOS and android and are part of the DTC model of Adidas.

MSQ Analysis

- Availability: Adidas app is a user-friendly app, whose interface is simple, menus are collapsible, cart icon always visible, and fast in loading. Nonetheless, there is an indication of crash incidences during constrained product release on user reviews on the Play Store.

- Interactivity: The user can interact through a chat with a bot or a live agent, post product reviews and view prebuilt training materials. Interaction is enhanced through real-time push drops, events, and delivery updates.
- Value-Added: The app gives the user exclusive access to products, pre-sales, and the Adidas Creators Club, which rewards activity. The use of QR-scanning in the store connects real and digital worlds.
- Security / Privacy: Good security practices are well expressed by the availability of biometric login and 2FA (two-factor authentication).

Health Tracking Adidas Runtastic now brands Adidas Running and includes health tracking (heart rate, distance) and community challenges. The planned AI-based coaching plans become available with Adidas Training. These expand retention, development of habits, and perceived value. As an example, in 2024, Adidas organized the "Run for the Oceans" campaign, where users were asked to accumulate kilometers to help with cleaning up their oceans, which combined sustainability and engagement with their brand.



Digital Innovation and Infrastructure

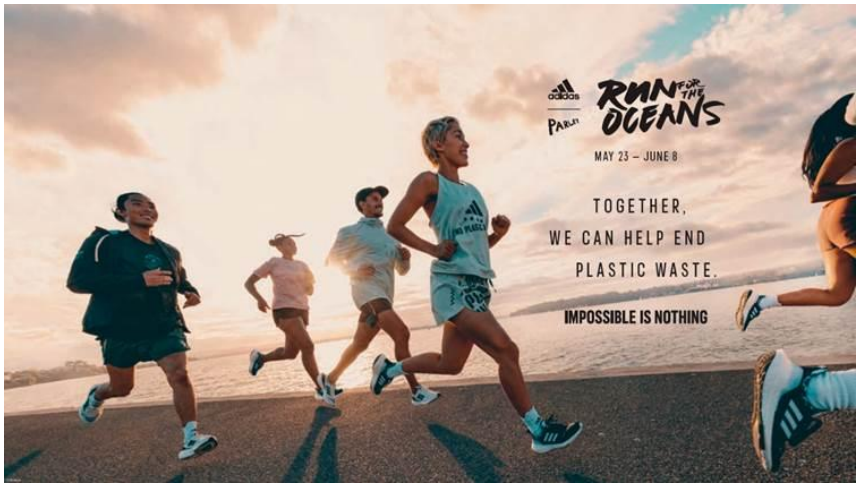
Adidas has spent more than 1 billion euros to digitally transform itself, focusing on cloud-based migration, AI/ML applications, integration, and uniting platforms. Using the SAP S/4HANA, AWS edifice, and data mesh systems, it is possible to:

- Real time visibility and forecasting of stock
- Hyper-personalization of apps and site
- Integrated mobile, web and retail analytics

Innovative Features:

- AR Sneaker Try-On: Adidas added WebAR to some product pages, creating the opportunity to virtually try shoes with the help of the phone camera.
- AI Styling Tool: week-long beta-test in 2024, this tool can offer full outfits based on previous purchases and popular styles.
- Sustainability Filter: This is a new addition whereby it is sorted by whether the item has recyclable content, water-saving dyes, or vegan materials.

Such innovations better the quality of digital services via ensuring a better fit, a sense of trust, and decision support.



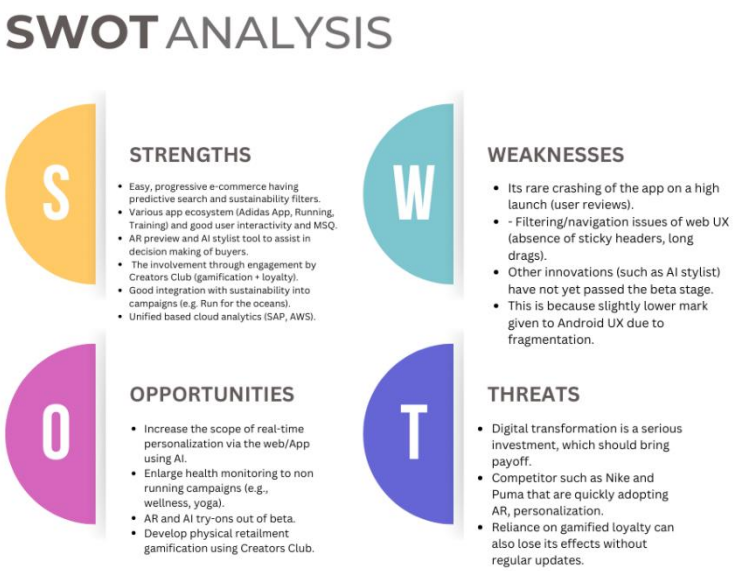
Community engagement, Influencers, and social media

Adidas tell their brand stories on Instagram, TikTok, Facebook, YouTube and Twitter in a consistent manner. The brand also shares a mix of product campaigns and surrounds the broader athlete and brand affiliation like Lionel Messi and Mo Salah, along with purpose-led storytelling like the End Plastic Waste and Move for the Planet campaigns.

Localized Campaigns:

- In Australia, Adidas has cricket-oriented promotions based on Big Bash league where they adjusted local interests.
- In India, Adidas teamed up with Bollywood stars and influencers to do gender-neutral campaigns and to follow its idea of the Home of Sport.
- User-Generated Content (UGC): Hashtags such as #adidasrunning and #ImpossibleIsNothing increase UGC activity worldwide, which is frequently posted on the main Adidas accounts to keep the community feeling.
- Creator Community: Adidas Creators Club will reward a point upon app use, purchases, reviews, and exercises. These points give access to early products, individual customizations, and invitations to online events. Such is the gamification approach that enables long-term interest.

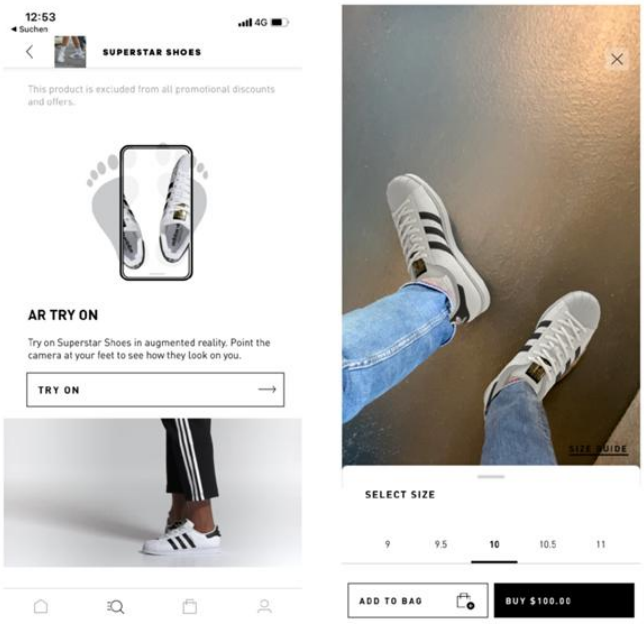
SWOT Analysis Summary



Online Value (OVP)

- Adidas provides a hybrid online value statement: Empowering athletic identity through innovation, sustainability, and personalization.
- Personalization: Custom product releases put an emphasis on apps, personalized curation of products powered by AI and personalization tools
- Sustainability: Sustainability campaigns such as End plastic waste, products filters, and green badges
- Community: Adidas Running competitions, influencer user-generated content, and loyalty systems of tiers
- Innovation: AI styling, AR Try-on and SAP-based precise inventory

These are some of the elements that Adidas is not just a retailer but a digital lifestyle ecosystem that attracts Gen Z to the younger generations and millennial consumers as well.



COMPANY ANALYSIS (Nike)

Web Experience and E-Commerce Performance

Navigation and interface (WebQual)

The site of Nike (https://www.nike.com/au) is characterized by a modern design with a creative visual presentation, notable font, and a fast rate of loading. The product is marketed by personalizing the homepage to the location and product the user is interested in. The dynamic hero banners, immersive story Telling's, and interactive scrolls present global campaigns such as You Can't Stop Us and Play New.

The main types of the product (Men, Women, Kids, Sale, Customize) have dropdown characteristics, including featured products, featured collections, and seasonal themes. Site search encompasses auto-fill suggestions, history and filter-by-sport.

E-S-QUAL Service Quality

- Efficiency: Highlight information: quick loading; dynamic filtering to size& color; sport
- Fulfillment: Availability of products by location; various plans for returns and next-day delivery
- System Availability: Browser/device cross compatible and minimal downtimes
- Privacy: Cleared cookie preferences, HTTPs encryption and data handling policies that are easy to understand
- Trust Signals: Customer ratings verified reviews and trust badges (such as Climate Pledge Friendly) help convince the buyer that Nike can be trusted. Their badge on the products that are only available to members also induces exclusivity and perceived value.

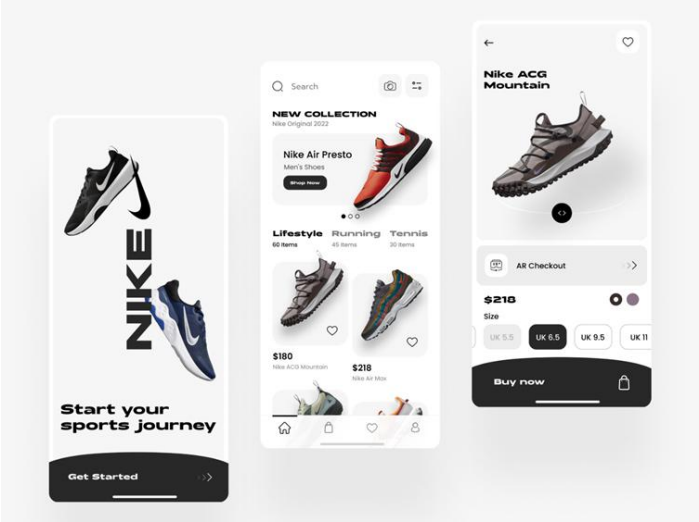
Assessment Engagement in Mobile App and MSQ RATING

Nike has several apps around the world: The Nike App (DTC commerce and personalization), Nike Training Club (fitness) and Nike SNKRS (product drops and streetwear exclusives). Every application has a good rating (average 4.8 stars on iOS, 4.6 on Android).

MSQ Framework:

- Usability: Pleasant UX, fast category search, swipe to shop, biometrics log in
- Interactivity: personal coaching materials, exercise reminders, live chat, and polls exclusively.
- Value-Added Services: Availability of fitness tutorials, livestreaming and app personalization (e.g.: Nike by You)
- Security/Privacy: Two-factor authentication, Face ID and user-controlled data sharing functions

The Nike App is location-based, gender-based, Browsing and engagement-based. As an example, the Australian users get to view cricket training-gear and summer-wear lines during high seasons.



Digital Innovation, Integration

Investments made by the company in data science, AI/ML, and demand-sensing technology have facilitated Nike to embrace digital transformation. Interactions with Apple Health and compatibility with Smartwatches are other extensions of Nike ecosystem.

Innovative Features:

- Nike Fit: Artificial intelligence-based sizing system that maps the size of the feet and proposes the ideal size of the shoes with use of AR
- Live Q&A with athletes, livestream product release
- Personalization Engine: Homepage customization now, recommendation of the product based on prediction, email flows depending on history of the training

Mostly mobile and digitized sales contribute to the increased number of Nike direct-to-consumer (DTC) revenue, which now amounts to more than 40% of the total (Nike, 2024).

Community and Social media presence

The digital storytelling by Nike is community and aspirational. On Instagram (nike), activities are organized on the creation of diversity, inspiration, and sport innovation. Facebook is more used in promotions, events, and customer support.

Localized Campaigns:

- Nike introduced the series of the Play NZ/AU in Australia, featuring the athletes of the country
- Indigenous collaborations with indigenous artists in NAIDOC week emphasized cultural authenticity

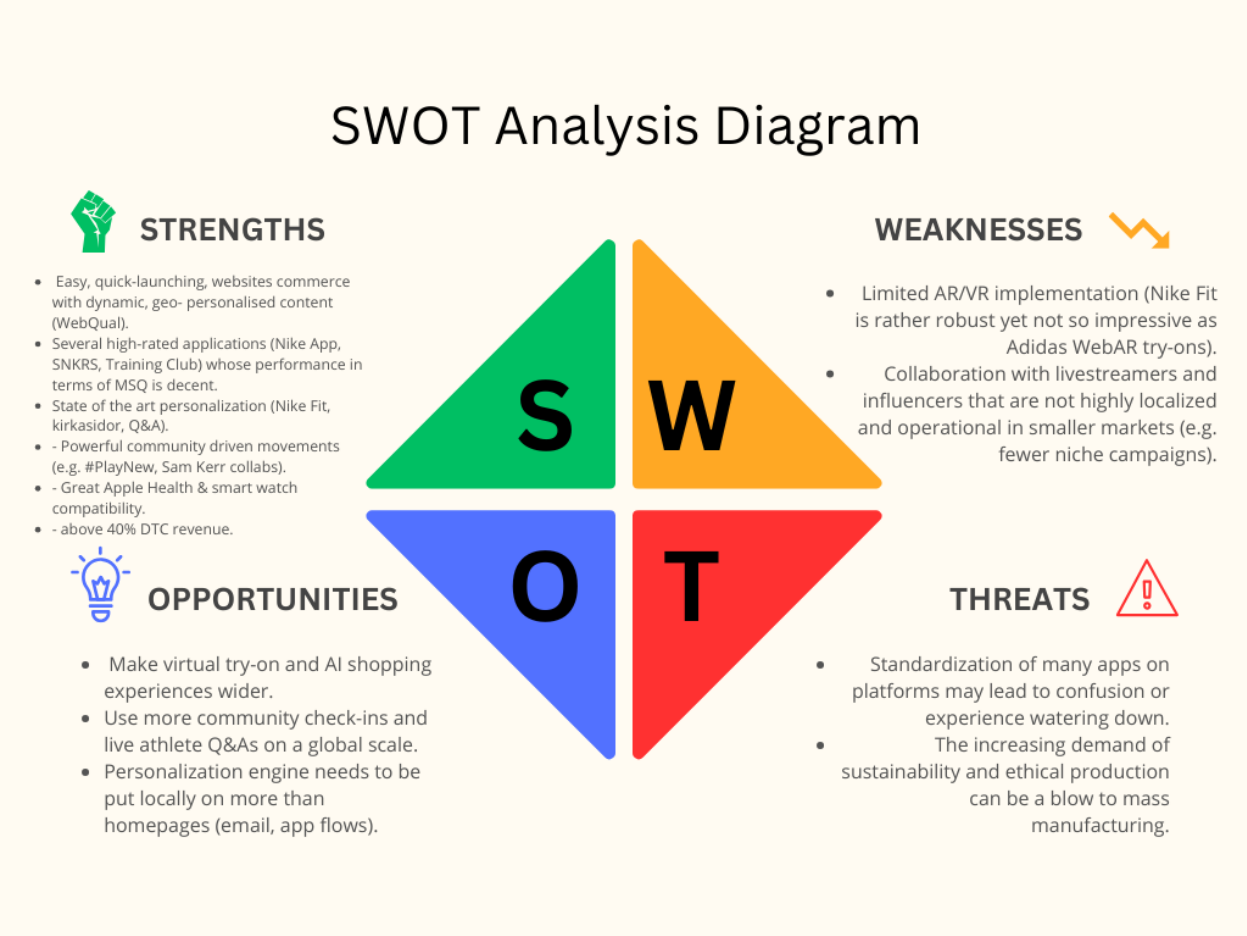
Community Tools:

- Challenge-created content (e.g., PlayNew, MyNikeFit)
- Partnerships with fitness celebrities and players such as Sam Kerr and LeBron James

Using the app to check-in and receive localized offers provided at the “Nike Live” stores

These strengthen the status of Nike as a hybrid brand in terms of community, technology, and lifestyle.

SWOT Analysis Summary



Value Proposition Online (OVP)

The OVP of Nike is centered around the following: Empowering Every Athlete Driven by innovation, community and personal potential.

Essential Digital foundations:

- Innovation: AI sizing, virtual tries and app-created journeys
- Individualization: Member-specific equipment, dynamic or versatile homepage, geo-location offers
- Community: Community, UGC, challenges, live coaching and forums
- Purpose: Social justice topics, local collaboration, inclusion of representation in sport

This makes Nike more than the sportswear brand; the brand is the way of self-expression, motion, and encouragement.

COMPARISON TABLE

	Useability		Price		Convenience		Quality		Reach	
	Nike	**Adidas**	**Nike**	**Adidas**	**Nike**	**Adidas**	**Nike**	**Adidas**	**Nike**	**Adidas**
Website	Nike also has an accessibility attribute, such as alt-text description of images and using the keyboard to navigate on the site, making it more inclusive.	Adidas shows minimal advancement in accessibility, which could potentially restrict access to other users.	Nike has a high-end pricing that hardly offers any discounts to enhance exclusivity.	Adidas has frequent offers and seasonal sales to pull the price sensitive consumers.	Nike offers a saved shopping cart, and customers can switch devices without having to stop at the checkout.	In the case of Adidas, cart functionality is not persistent so customers might not be able to resume his or her shopping experience.	Nike offers animated 360 product experience on a wide range of products allowing users to inspect a product thoroughly.	Adidas, on the other hand, uses almost still images presenting lifestyle-oriented photography.	Nike wins in the highest places in Google in big words, such as running shoes or sportswear.	Adidas in small spheres, such as sustainability or eco-friendly sports shoes.
	Nike has an auto searching box which makes product searching faster as users type them down.	Adidas has temporarily dropped regarding filtering which may interfere with the browsing experience.			Nike has integrated AI into advising the user to choose a size according to the history of purchase items and by entering data about the body type.	Adidas asks the user to enter the size themselves, opening the possibilities of uncertainty regarding the size.	Nike highlights customer reviews and ratings giving buyers the ability to make better purchase decisions.	Adidas, which does not highlight many users generated reviews and ratings of its products on its product pages.	Nike is more successful in paid and unamplified reach in search engine-related activities.	Adidas has spikes in visibility throughout selected campaigns.
	Nike offers a convenient search process with a minimum of scrolls and clicks.	Adidas more often uses product pages with scrolling that can be rather inconvenient to users who want to view as many items as possible.			The process of returns at Nike is quite convenient and transparent (prepaid returns labels in most countries).	Returning an item to Adidas can be more manual and region-specific.	Nike has elaborate product descriptions, fabric technology, and performance advantage.	Adidas narrows down the product description and emphasizes the visual attractiveness.	Nike enjoys a better backlinking to high authority publications and influencers.	In contrast to Adidas to whom it is more of campaigns and collaborations who achieve visibility.

	Useability		Price		Convenience		Quality		Reach	
	Nike	**Adidas**	**Nike**	**Adidas**	**Nike**	**Adidas**	**Nike**	**Adidas**	**Nike**	**Adidas**
Mobile Application	Nike has maintained a clear and tab-oriented structure where all services can be found within the app including shopping, fitness, and control of personal profile.	Adidas has divided all services into different applications, making the user experience disorganized.	The approach to pricing used by both brands, Nike and Adidas, are regionally targeted and organized around a regional app ecosystem because the focus of both brands is on using pricing strategies to stimulate demand. Nike takes advantage of regionalizing its pricing strategy.	Adidas employs region-wide pricing stratifications and bundling offers to motivate purchases.	Nike has incorporated its store into a fitting style and training information in its application.	Adidas has divided them into two separate applications, which makes it less practical.	Nike always gets good scores in app stores caused by stability, design, and constant updates.	Adidas, on the other hand, gets mixed reviews because of the problems with its performance in certain regions.	The fitness and shopping apps provided by Nike claim the stake as top in their respective categories in the world.	Adidas' concise app, CONFIRMED, is popular among niche sneaker audiences but not prominently adopted.
	Nike has an easy onboarding process and a natural feeling in navigation with gestures.	Adidas has a clean design yet is facing the risk of sluggish surfing between sections.	Nike instead offers loyalty rewards in the form of member-exclusive prices, special drops, and access to early releases.	Adidas focuses more on member perks in the form of quick win offers, such as app coupons and Flash sales.	Nike already provides virtual fitting service on specific products (therefore providing a higher degree of comfort purchasing request).	Adidas is yet to provide such an application of AR.	Nike focuses on a consistent UX experience to its namesake and SNKRS apps.	Its rival Adidas also does a great job of visuals but has slightly less cohesive experience because of app fragmentation.	Nike supports over 20 languages and whenever it publishes apps, they are globally available.	Adidas is regionally spotty and less functional.
	Nike optimizes the user	Adidas offers less personalization			Nike makes the process of reordering	Adidas, which forces people to manually	Nike adds frequent updates to	Adidas has fewer updates, which may lead to time	Nikes push campaigns present high	Adidas offers low availability rates

	experience on a profile-preferred, activity-synced basis.	and user tracking.			easy by having an option to save the history of product purchases and having fast checkout.	search on their previous purchases then repurchase it.	enhance the features and eliminate bugs.	lags in bugs being fixed.	uptake and participation.	and lacks customization.

	Useability		Price		Convenience		Quality		Reach	
	Nike	**Adidas**	**Nike**	**Adidas**	**Nike**	**Adidas**	**Nike**	**Adidas**	**Nike**	**Adidas**
	Nike has more professional and regular images with a well-defined schedule and aesthetic quality.	Adidas has a fresher style with less predictable and sloppy layout.	Nike does not talk about pricing as such on social but implies support (desire to buy) by not selling an image of an aspirational brand.	Adidas uses its posts and Stories to advertise sales and discounts.	Nike provides an in-app transfer from social networks to product launch.	Adidas is focused on channels and external bloggers to convert sales.	Nike creates high-rate, large-scale social content with world athletes and smooth imagery.	Adidas offers pure, culture-related narration and openness.	Nike has more than 300 million followers on platforms and has a large engagement.	Adidas has a rapid growth in new platforms such as TikTok among young people.
Social-Media	Nike structures its Stories according to the highlights, which makes it easier to get information about product features, campaigns, and athletes.	Adidas leans heavily on the high post frequency to convey the same messages to the audience.	Nike is versatile in advertising limited-edition collaborations without putting a serious focus on pricing.	Adidas constantly presents price advantages in the advertisements of partnerships visibly.	Nike makes sure that labeled products and such tools as link-in-bio refer to the most significant products.	Adidas commonly integrates shopping with Instagram Shop and local language posts.	Nike has a consistent branding on all the posts and channels making its identity straighter.	Adidas is more dynamic in its voice and visuals to align to the platform trends.	Nike benefits by having global sports celebrities endorse the brand in high profile advertisements.	Adidas employs the technique of influencer marketing which provides the brand significant Gen Z appeal.
	Nike incorporates the possibility to shop by	Adidas focuses more on the interactive Reels and	Nike supports high-end value with the story.	Adidas prefers price-based calls to action, prompting quick interactions.	Nike establishes a lesser form of pathways between	Adidas focuses on engagement by telling stories and creating	The content of Nike focuses on high performance	Adidas focuses on community, collaborations and user-	Nike observes stable rates of fan tagging and brand involvement across markets.	As opposed to that of Adidas, which performs better when working

	clicking, such as product tags or swipe-ups.	creator-driven calls to action.			social engagement and mobile interactions.	collaborations with influencers.	in sport and innovation.	generated content.		in trending campaigns and youth culture collaboration.

RECOMMENDATIONS

Optimization of Digital Commerce Dreams with Personalization (Sell & Serve)

Speed, usability, and the quality of the content are the areas in which Nike has already performed well on its site and mobile application. Nonetheless, Nike should enhance the personalization systems of its digital touchpoints to compete with Adidas's aggressive approach regarding visibility and pricing. This covers the development of coherent, responsive engagements in the form of AI-generated suggestions and the personalization of homepages and contextual offers. Personalization is also necessary to the success of conversion rates and re-enforcing brand identity values messaging that uses technology as an enabler of the lifestyle and partnering with Nike.

To accomplish this, Nike must deploy a cross-platform personalization engine, which modifies homepage content, product recommendations and contextual price-based offers dynamically. This goal fits the SMART model since it is specific and measurable (a 15 percent improvement in the rate of repeat purchase and 10 percent decrease in bounce rate), feasible within the already provided AI and data infrastructure, aligned with the strategic concerns of Nike, and time-sensitive with an execution time of six months.

Encourage individuals to participate and become community-driven content and culturally relevant (Speak & Sizzle)

Although Nike is also rather successful due to the advanced campaigns and endorsements by international figures, Adidas wins in terms of interacting with audiences and UGC using such popular platforms as TikTok and Instagram. Nike may continue to develop community co-creation, such as challenges created by the influencers, posts labelled by the customers, and submissions with rewards. Accentuating social storytelling, local ambassadors, and micro-influencers will help to address the problem of lack of authenticity, increasing engagement, particularly among Gen Z.

To prove the point, Nike must introduce a user-generated content movement on TikTok and Instagram with the help of micro-creators and athletes. This project can be seen in the SMART objective pattern: the project is specific (aiming at 10 percent growth in Gen Z followers and 25 percent growth in engagement) and measurable, achievable by utilizing the current social media possibilities, relevant (it will help Nike gain a stronger brand identity among the youth), and time-bound, with a performance period of six months.

CONCLUSION

As this report shows, Nike scores high in technical performance, customizing user paths, and platform integration, whereas Adidas is doing better in the emotional branding segment, cultural belief stories, and Generation Z-related connections. Nike has strength in the strength of its application ecosystem and the user experience on the website, and Adidas has strength in originality and with its figures and communities. Nike will have to alter its strategy to ensure that it remains a leader in the competitive digital fitness and fashion industry by leveraging its strength in infrastructure and enhancing it through dynamic, user-generated and culturally relatable experiences of content which promote a high volume of interaction and build brand loyalty.
